### DETAILED ACTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8 and 31-35, drawn to method of protein purification using chelate chromatography, classified in class 530, subclass 317.
- II. Claims 9, 18-21, and 24-31, 36-37, drawn to a metal complex, classified in class 549, subclass 206.
- III. Claims 14-17, drawn to method of synthesizing carboxymethylated aspartate, classified in class 549, subclass 206.
- IV. Claim 23, drawn to method of screening, classified in class 436, subclass 86.

The inventions are distinct, each from the other because of the following reasons:

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the coupling of the asp to the resin can be carried out under different conditions and using different reagents as disclosed in the Mantovaara et al. reference (on 1449).

Inventions of Group IV and Group I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together, or they have different modes of operation, or they have different functions, or they have different effects. (MPEP § 806.04,

Art Unit: 1654

MPEP § 808.01). In the instant case the different inventions the method of screening would not suggest a method of purification of a recombinant protein or a method of making the agarose resin. The method of screening employs a different mode of operation in that an assay used which is not used in the method of purification or method of synthesis.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the search required for Group I is not required for Group III, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
